

eClassic is a Patient care Management system. It automates and manages the day-to-day operations of clinics. It helps a doctor manage various routine activities like managing Patient Master Index (Patient Registration), scheduling/ synchronizing Patient Appointments with Consultant Clinics time slots, collecting Clinical Profile information at the time of each encounter and examination and lastly the system offers comprehensive Billingoptions.

eCLASSIC offers Physicians, Doctors and Assisting staff various options to enter Patient demographic details and it captures medical and administrative information during patient visits. Itsupports drug prescription, order of diagnostic test procedures.

Bills are generated against the administered drugs, services offered to patients, Consultation fees and accept payments in various ways. eCLASSIC intelligently tracks receivables of a patient or the sponsoring Organization. eCLASSIC is developed in Microsoft Windows development environment using an intuitive Graphical User interface. eCLASSIC is easy-to-use and quick to implement on latest industry standard PC .

eCLASSIC provides Physicians, Doctors and Surgeons with computerized options of recording Patient clinical and Billing information, thereby reducing dependence on assisting staff. With the availability of on-line electronic medical records, patient service levels can be improved significantly. eCLASSIC facilitates communication with other healthcare specialists in the network for a second opinion or expert opinion. In a net-based economy all doctors benefit from the availability of skills across the network to improve patient care and reduced costs.

Care modules comprise:

- Patient Registration /Patient Master Index (PMI)
- Patient Appointments
- Appointment Status Reports
- Appointment Modification
- Doctor Consultation
- Procedures & Prescription Generation
- Electronic Medical Records Generation
- Electronic Medical Records Transmission
- Bill Generation
- Bills Receivable
- Bills Payable

eClassic has the facility to send and receive Patient information electronically (Electronic Medical Record - EMR) using Internet or Intranet facilities. Classic can be upgraded to next higher level product CARE/ CARE2 - a Healthcare Information Management System offered to Clinics, Nursing Homes and medium size hospitals with outpatient and Inpatient facility.

REGISTRATION / PATIENT MASTER INDEX

eCLASSIC offers Registration form at the Clinic. It eliminates opening of duplicate patient record (file) by verifying patient demographic information against already stored Patient records from its Database (by Name, Date of Birth, Religion and a combination of several other fields).

While registering a patient it captures demographic data, sponsor organization information, billing information (Insurance Company, self, Organization etc.) and several other statistical information. When a Registration is confirmed, system has provision to print Patient Id Cards, and Registration Form labels etc.

The System generates a unique patient Index Number (PIN) to each patient. Once a file (PIN) is issued all the operating units and Back office staff in the Clinic can obtain patient information.

CONSULTANT CLINICS

eCLASSIC location "creation" utility allows a Clinic to set-up unlimited number of operating locations. It provides options to generate Clinics and Doctors. This facility uniquely helps doctors practicing from multiple locations to schedule their duty time for each location uniquely, this feature also supports Doctor non-availability.

The system generates Doctor's Diary covering daily activities. System provides options to Bill Sponsor Organizations, Insurance companies and produce Split bills. Back dated transactions can be entered. Authorized administrators can enter discounts.

EMR GENERATION

An EMR (Electronic Medical Record) consists of complete clinical information (medical history, Diagnosis, Prescription and Investigation information etc) of the patient. Doctor can define an EMR and transmit it to another doctor / hospital / Health Care facility for second opinion through Internet or Intranet.

PATIENT BILLING

System provides a comprehensive and fully integrated automated Billing system. Rate Masters database is provided to record rates for various services and facilities. All services availed by patient generate automatic Billing entries.

It has the facility to generate service charge entries for Registration, Consultation, Radiology, Laboratories, Physiotherapy, Special investigations, Drugs and special optional services.

Cash / Credit Bills are generated upon request. eCLASSIC provides options to issue Invoice and accept payments. Bill can be split between patient and Sponsor Company or Insurance Company as per Clinic's arrangement with patient.

Executive Summary

eCLASSIC provides a comprehensive Patient care management solution for clinics in a network economy, increases efficiency, productivity of doctors there by increasing revenue generation.
